## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of Group I, claims 1-15, in the reply filed on November 11, 2005 is acknowledged. The traversal is on the ground(s) that there are no material differences between the Groups and there is no serious burden on the examiner. This is not found persuasive because the searches required for the different Groups are not coextensive and because the searches required for the apparatus and methods are not coextensive and the apparatus can be used for different processes.

The requirement is still deemed proper and is therefore made FINAL.

Claims 16-92 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on November 11, 2005.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 4,843,209 to Milligan. Milligan discloses laser, fiber optics, lens, and multiplexer-controller in a material processing environment. The intended use of a

device in a vacuum, zero gravity, or with a particular work piece such as an aerospace vehicle does not impart patentability to apparatus claims.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,843,209 to Milligan as applied to claim 4 above, and further in view of USPN 6,918,905 to Neuberger. Neuberger discloses a multi-piece housing (Figure 5) and the use of any well known work piece housing with the apparatus disclosed by Milligan would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because containment of a work environment is well known for ablative work processing. Multiple devices, location pins, and levers for tool operation are all well known working tool features and the incorporation thereof into a housing or work piece holder such as Milligan or Neuberger disclose would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the tooling features provide good interaction between the tooling and the work.

***Conclusion***

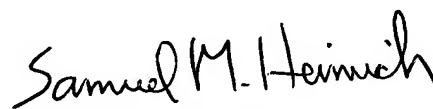

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hatakeyama et al disclose processing a plurality of surfaces of a work piece.
